

Global 500 Computer Software Company

Introduction

This case study of a Global 500 computer software company is based on a March 2018 survey of Agari customers by TechValidate, a 3rd-party research service. The profiled company asked to have their name blinded to protect their confidentiality.

“Agari Enterprise Protect specifically helped us with identification of display name impersonation. This is one vector Agari identifies which EOP/ATP is not able to identify.”

Challenges

The business challenges that led the company to evaluate and ultimately select Agari was the need to protect against business email compromise and executive spoofing attacks.

Use Case

The company uses Microsoft Exchange Online Protection as their existing Secure Email Gateway and Microsoft ATP to provide Advanced Threat Protection for their email channel.

The company chose Agari Enterprise Protect to shield themselves from business email compromise/executive spoofing.

Results

The surveyed company prevented executive display name impersonation with Agari Enterprise Protect.

The company rated Agari's detection and prevention capabilities as follows:

- Advanced email attacks: better than the competition
- Impostor based attacks: significantly better than the competition
- Incident response & forensics: better than the competition

Company Profile

The company featured in this case study asked to have its name publicly blinded because publicly endorsing vendors is against their policies.

TechValidate stands behind the authenticity of this data.

Company Size:
Global 500

Industry:
Computer Software
